3.How to Connect Users with us?

Introduction

First, I would like to explain,

What are the happy Tails?

Happy Tails is a website created by me. So let's see what I like about Happy Tails, why this website was created, and to whom this website is useful. The Happy Tails website was actually created with the homeless dogs and pets on the streets in mind.

Why this website was created, the increase in the number of helpless dogs and pets in the streets can be a contributing factor to the increase in diseases. For example, this can be a contributing factor to the spread of diseases such as Albicans disease, mad dog disease, etc.

So, taking this as a reason, we work to provide shelter for the dogs on the road and our website publishes the details of all the dogs that have been sheltered in this way. And anyone who visits our website can get these details and can get dogs from us to breed as pets.

Here I would like to introduce you to the special features of our website. That is, through our website, you can get all the details free, starting from the smallest matter of what kind of food should be given to a dog.

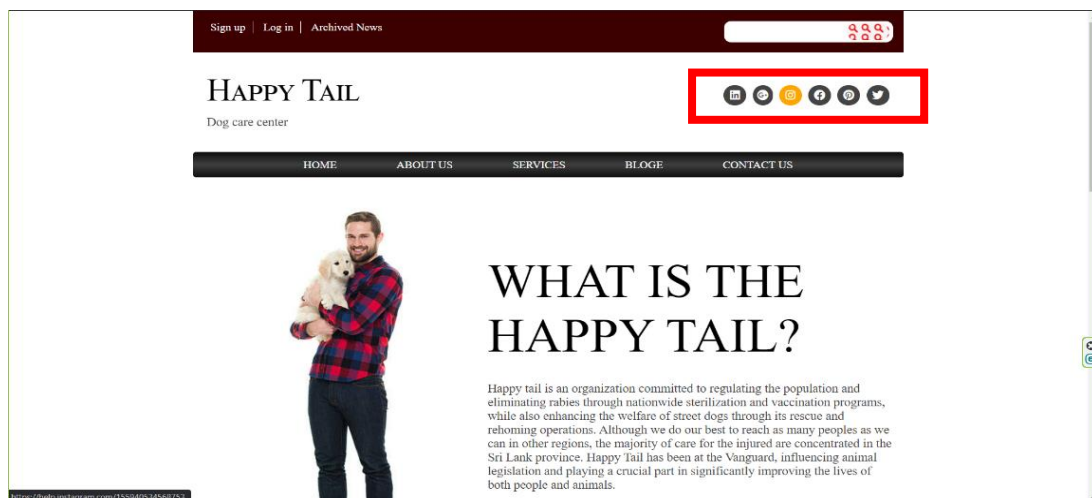

So even if you have the desire to have a dog, you may lose your desire because you don't know how to do it. So I am sure that you have been given the best solution through my website.

I can also point out that this website was created thinking about the current situation and economy. I think the introduction given to you about my website is enough. Well, let us see about the design of my website.

Design

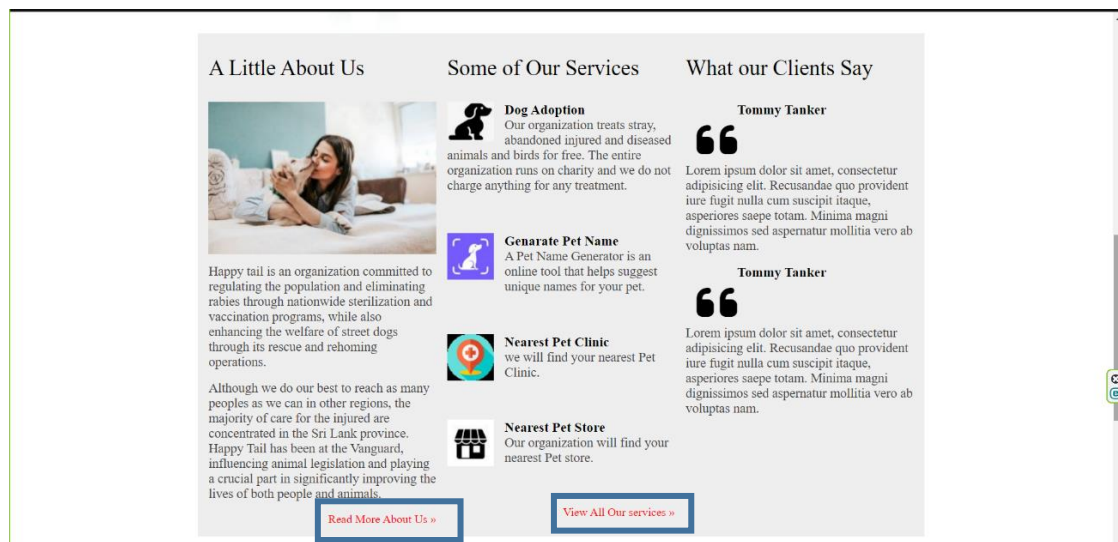

I created my website as a professional website. Also, quick links have been used considering the needs of the users visiting my website. Through that, I hope to increase the number of visitors to my website. I have used only CSS for all these designs.

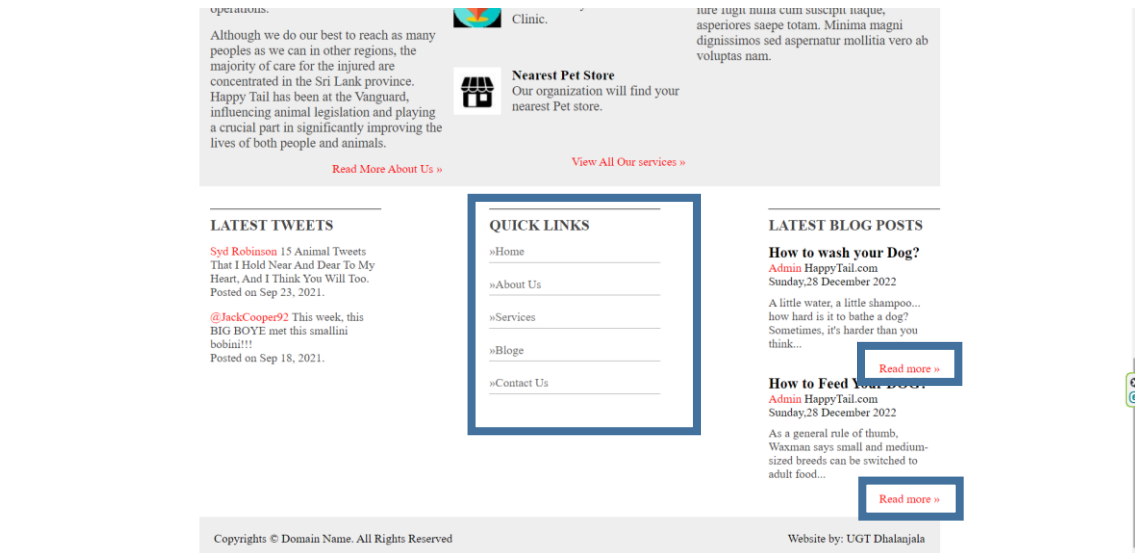

I am attaching below some images taken from the website to show you that.

When you click the social media icons that you can see in the red box, you can easily access those websites. Because quick links have been used for that.

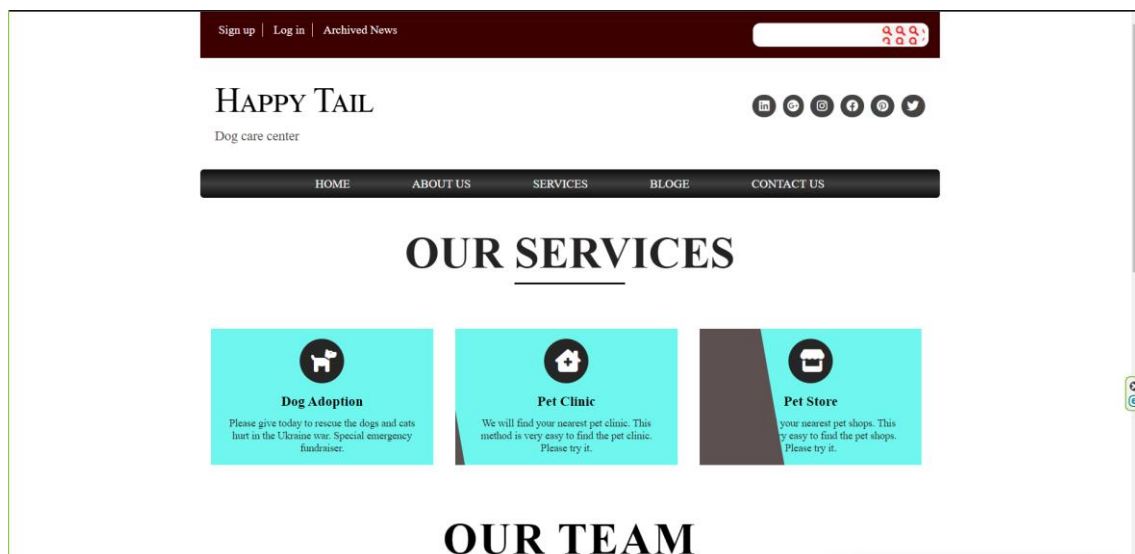

Also, not only for social media, the user has been given this facility to easily access the web pages of our website and our blogs. The reason for that is because we are always committed to providing the best service to the users who visit our website. I am attaching a picture of the website to prove it to you.

The design of the website can be pointed out as one of the things that were given primary attention when creating the website in order to increase the attraction of visitors to my website. So I have used different designs for each web page of my website.

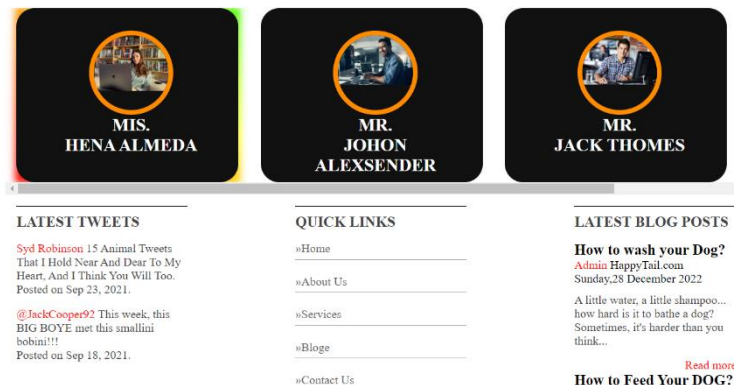

I would like to show you these designs one by one.

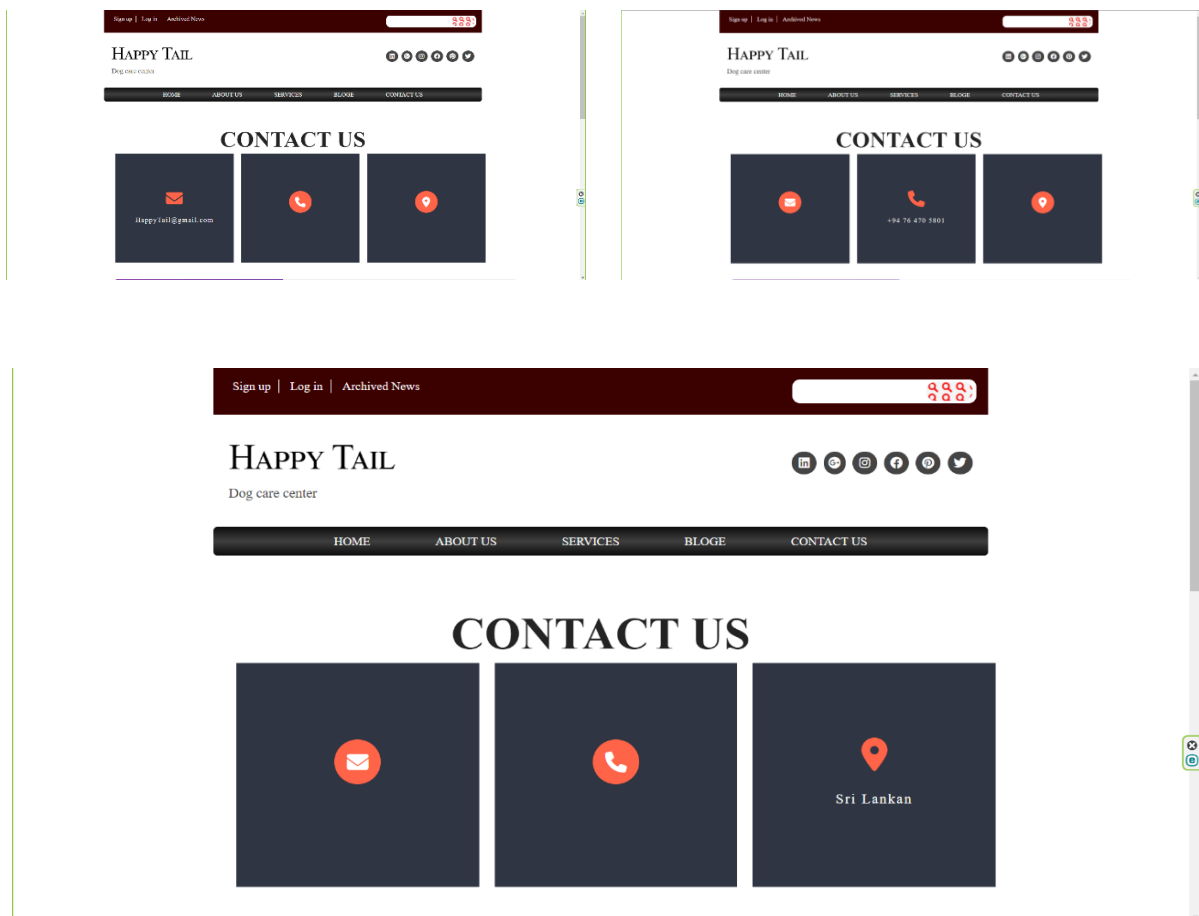

I have used a colour movement for the 3 boxes shown under our service on our service page. I have designed it to move when the cursor point is placed on those squares.

When placed on the boxes containing the details of our company members shown under the theme of our team, a colour pattern moves around those boxes.

OUR TEAM

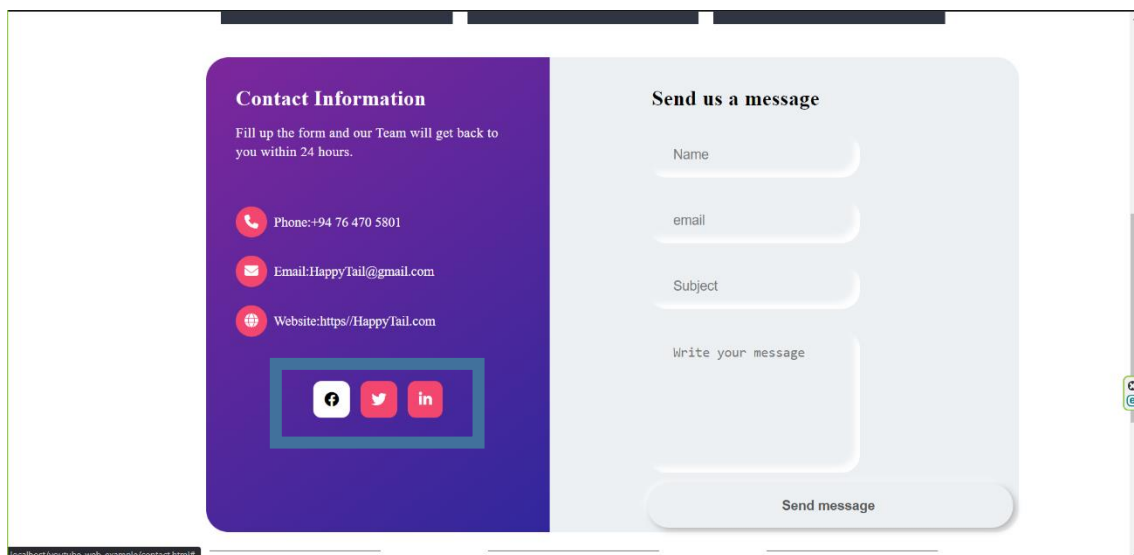

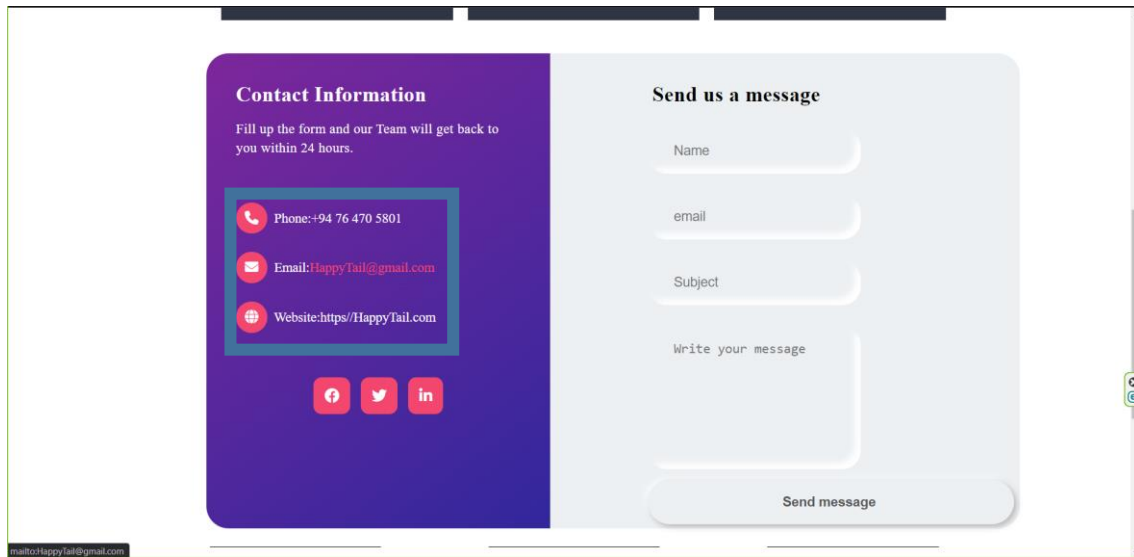

If we talk about contact page, I have used a different design for it. I would like to show them to you in pictures.

What can be seen here is that when the cursor point is placed on the indicated boxes, the details hidden in those boxes can be seen.

Another thing is that when you place the cursor point on the icons and names on my website, you can see a change in colour.

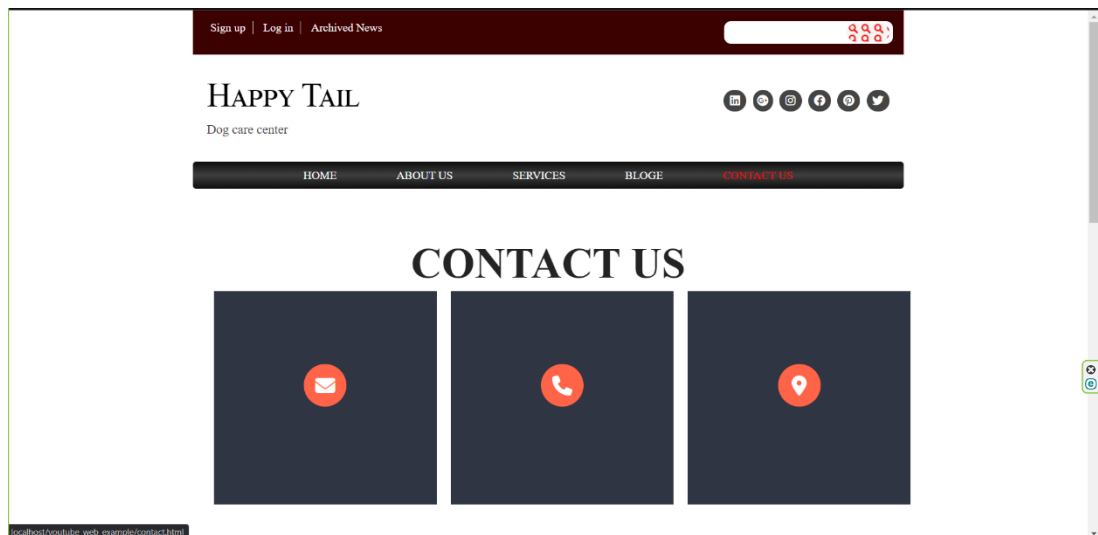

How to Connect Users with us

Let us now see how users can contact us and get more details from us.

If users receive further information from us, they form a relationship with us. We have created the contact us page to build that connection. When you fill out the Contact Information form on that page and click the send message button, we will contact them. Let me take this opportunity to explain to you step by step how it happens.

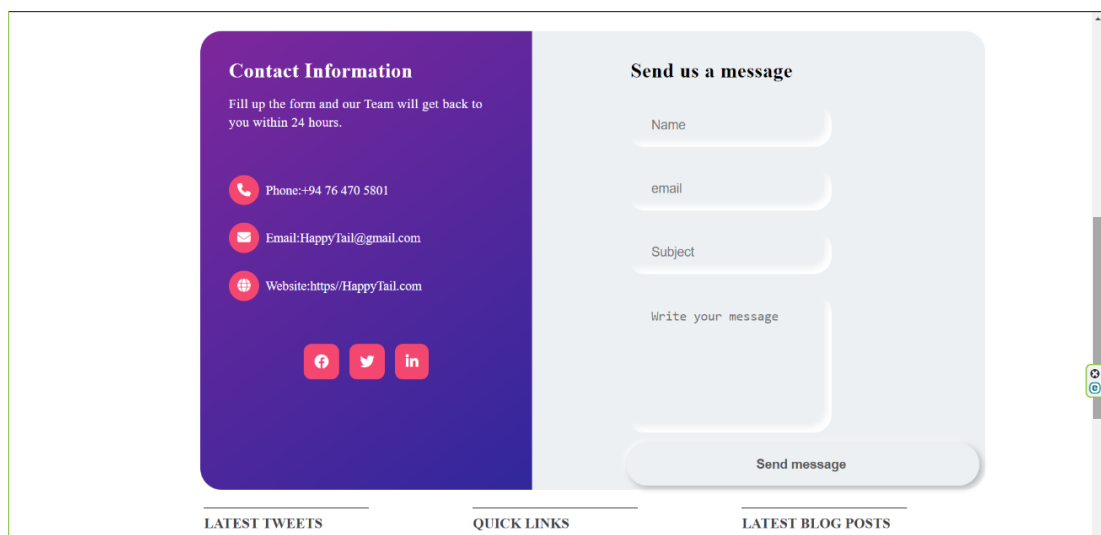

1. Step no 1

First, you need to go to the contact page.

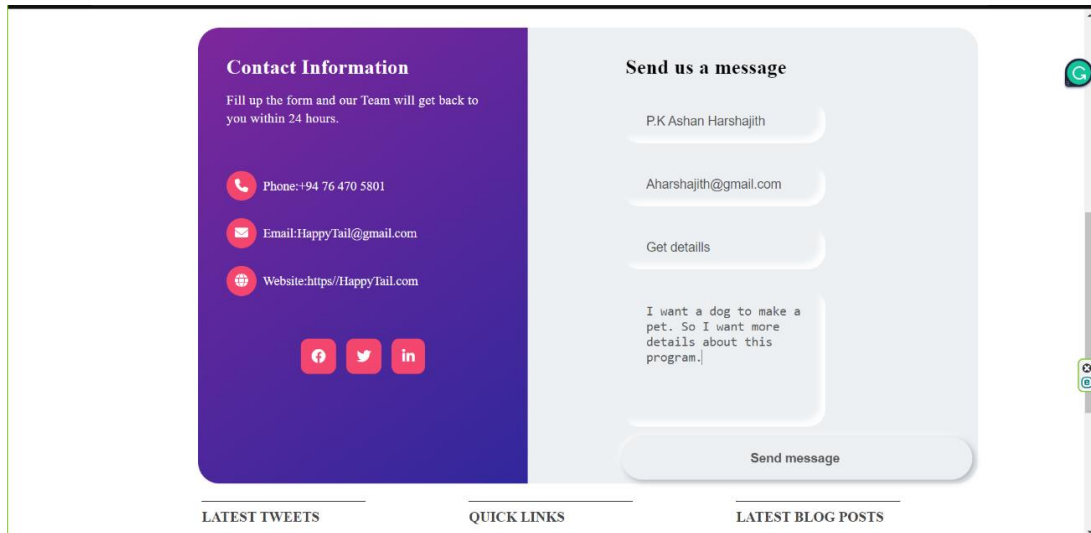

2. Step no 2

Then, you should find the contact information form.

3. Step No 3

Fill the form.

The screenshot shows a web interface with a purple sidebar on the left and a light blue main area on the right. The sidebar contains 'Contact Information' with phone, email, and website details, and social media icons. The main area has a 'Send us a message' form with three input fields: 'P.K Ashan Harshajith', 'Aharshajith@gmail.com', and 'Get details'. Below these is a text area with the message 'I want a dog to make a pet. So I want more details about this program.' and a 'Send message' button. At the bottom, there are three sections: 'LATEST TWEETS', 'QUICK LINKS', and 'LATEST BLOG POSTS'. A green cursor icon is visible on the right side of the form.

Contact Information

Fill up the form and our Team will get back to you within 24 hours.

Phone: +94 76 470 5801

Email: HappyTail@gmail.com

Website: https://HappyTail.com

Send us a message

P.K Ashan Harshajith

Aharshajith@gmail.com

Get details

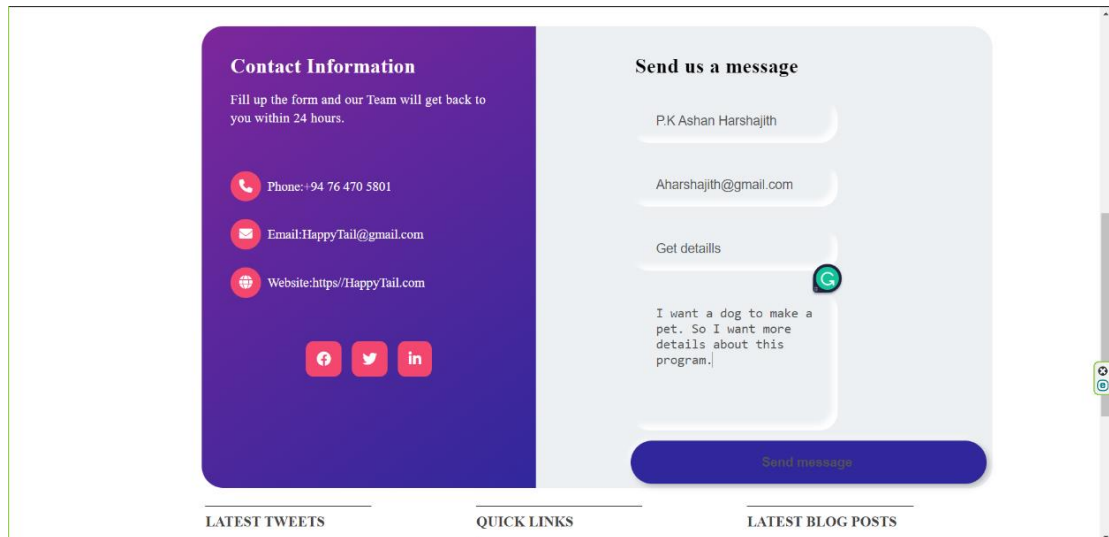

I want a dog to make a pet. So I want more details about this program.

Send message

LATEST TWEETS QUICK LINKS LATEST BLOG POSTS

4. Step no 4

Click the send message button.

This screenshot is identical to the previous one, but the 'Send message' button at the bottom of the form is now highlighted in a darker blue color, indicating it is the target for the next step. The green cursor icon is still present on the right side of the form.

Contact Information

Fill up the form and our Team will get back to you within 24 hours.

Phone: +94 76 470 5801

Email: HappyTail@gmail.com

Website: https://HappyTail.com

Send us a message

P.K Ashan Harshajith

Aharshajith@gmail.com

Get details

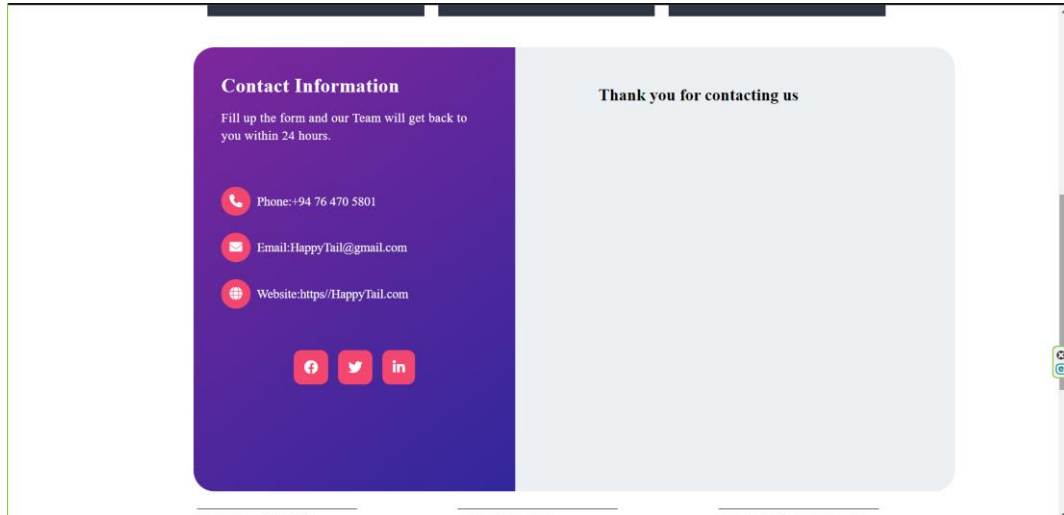

I want a dog to make a pet. So I want more details about this program.

Send message

LATEST TWEETS QUICK LINKS LATEST BLOG POSTS

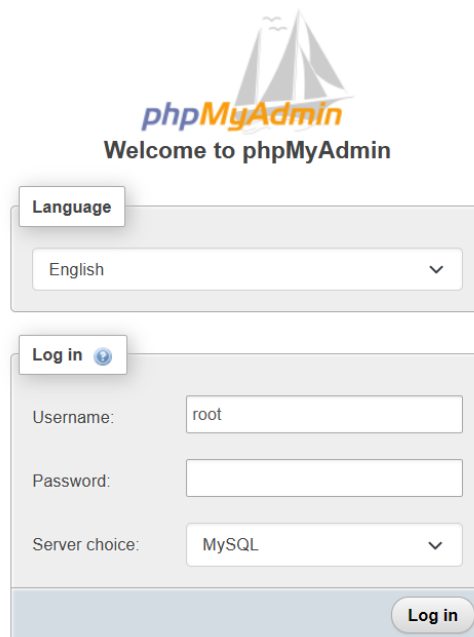

5. Step no 5

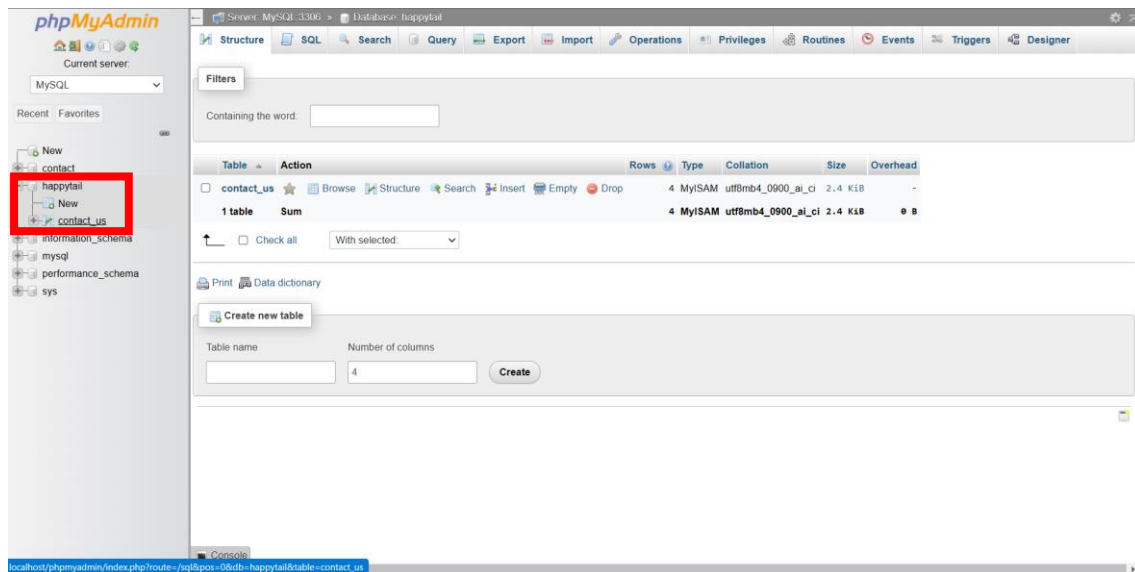

After clicking the send message button, you will see a message like this.

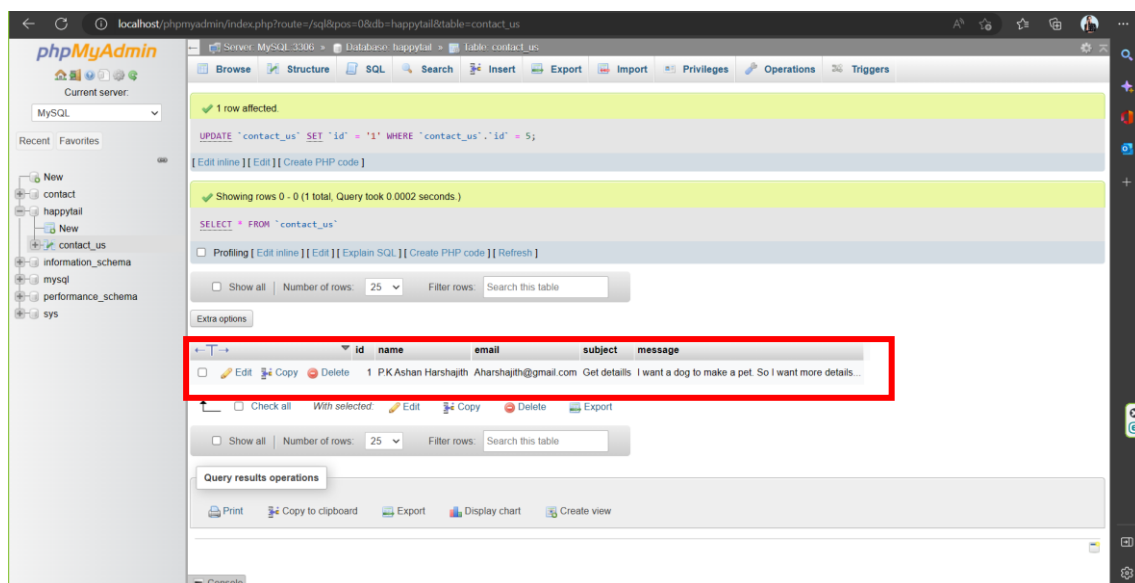

Now you are looking at where these details are going. Well, I'll explain it now.

To store the data sent to us by the user, I created a database from the wamp server using MySQL and PHP. I would like to add some images containing the details of my database.

The database I created is shown in the red box. Well, let's see if the data sent by the user to my website has entered my database.

This way we can make sure that we have received the data that we posted earlier.

Then we can get the data that comes to us through our website through the database and contact the user.

I think now you have a good understanding of my website.

I got a lot of knowledge from Sabaragamuwa University teachers to create this website effectively and I am thankful for that.

Thank You!
